13. Build the Model

1. Solution:

from sklearn.linear_model import LogisticRegression
model=LogisticRegression()
model.fit(X_train,y_train)
from sklearn.linear_model import LogisticRegression
model=LogisticRegression()
model.fit(X_train,y_train)

```
Output:
  LogisticRegression()
Question 14:
14. Train the Model
Solution:
model.score(X_train, y_train)
Output:
 0.83125
Question 15:
15. Test the Model
Solution:
model.score(X_test,y_test)
Output:
 0.675
Question 16:
16. Measure the performance using Evaluation Metrics
1.
    Solution:
from sklearn.metrics import confusion_matrix,classification_report
y_pred=model.predict(X_test)
confusion_matrix(y_test,y_pred)
Output:
 array([[5, 0, 0, 0, 0, 0, 1, 0],
         [0, 5, 0, 0, 0, 0, 0, 0],
